*Election/Restriction*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to method of identifying agents which modulate the interaction of Robo and a Robo ligand and Slit polypeptide, classified in class 435, subclass 7.8 and class 530, subclass 350.
- II. Claims 6-7, drawn to nucleic acid encoding Slit polypeptide, classified in class 536, subclass 23.5.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are biologically and functionally different and distinct from each other and thus one does not render the other obvious. The nucleic acid of Group II is not used in the method of Group I. The operation, function and effects of the nucleic acid of Group II are completely different and distinct from the operation, function and effects of the method of Group I which identify agents that modulate the interaction of Robo and a Robo ligand. Therefore, the inventions of these different, distinct groups are capable of supporting separate patents.

The polypeptide of Group I and the nucleic acid of Group II are chemically, biologically, and functionally distinct from each other and thus one does not render the other obvious. The polypeptide of Group I is not required to produce the nucleic acid of Group II (the nucleic acid can be replicated in vectors without use of the polypeptide) and the nucleic acid of Group II is not required to produce the polypeptide of Group I (which can be produced synthetically or isolated from cells). Therefore, the inventions of the two groups are capable of supporting separate patents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Richard Osman on 4/30/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in

Art Unit: 1636

compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
